Can we review/comments on the image alone? For me is too hard to take a decision just by looking at it, the result may be not so good anyway. Please just post something similar to what was posted about the download link with a 'review' tag. The screenshot is not even remotely the same, but OK, here it is. @DellDC, why do you say you are uncertain if someone was paid to post the comments you refer to? Who wrote those comments or who paid for them? If that is true, the person(s) that posted them should be reported to the moderators of this forum. I very much doubt it is you, since I can't imagine you would want to do that unless the contributor of the software has at least posted something else on this site with their identity, which I doubt is the case. I do not understand the issue with the screenshot. If I want to download an app, I just go and look at the download page of the site. Besides, this is not a review of a software application, but a review of the appearance of it. OK to be honest, the screenshots (in the link provided by the poster) are not very good, and they don't really make any sense since it is taken in a very narrow view range. I would suggest that everyone looks at the first post of the thread. In there, you will find a link to an official website of the software, a short description of the application, and a video. The video is in a format compatible with all sorts of Smartphones and tablets, and it shows more details than what is provided in the screenshot, and it also demonstrates how it looks when it is launched. In fact, it is a very powerful app that can be used by everyone. Don't hesitate to download it for a test, it is free. Then you can decide whether to get it or not. My 2 cents. These apps are used to cut, edit, split, enhance, and manage audio and video files. So what are the best... While doing some PC upgrades, I realized I needed a new SSD.
